Frontend / Full Stack Engineer with 10+ years of experience building scalable web applications using React, TypeScript, Astro, Java, Node.js, AWS, and PostgreSQL. Experienced modernizing frontend applications, building reusable component libraries, developing cloud-native infrastructure, and delivering full-stack solutions. Collaborative engineer with a track record of mentoring teammates, partnering with cross-functional teams, and delivering high-quality software from development through deployment.

RPI Print, Full Stack Engineer, 2024 – 2026

- Developed and delivered 25+ customer-facing pages for the Blurb and RPI Print websites using React, TypeScript, Astro, and Tailwind CSS, with a focus on WCAG accessibility, performance, and maintainability.
- Served as a go-to Astro engineer, delivering production applications and supporting adoption of the new frontend architecture.
- Built a reusable component library from the ground up, improving consistency and accelerating development across projects.
- Expanded into backend development by implementing shopping cart, checkout, and order services using Java, JOOQ, Flyway, PostgreSQL, and REST APIs.
- Built AWS infrastructure and deployment automation using CDK, CloudFormation, ECS, S3, CloudWatch, and preview environments.
- Mentored engineers and performed code reviews to support team development and code quality.

Liveperson, Full Stack Engineer, 2020 - 2024

- Led modernization of a legacy Jekyll application by building a React/Gatsby replacement, creating shell-based tooling to migrate Markdown content into a headless CMS, and implementing GraphQL-powered content delivery.
- Designed and implemented CI/CD pipelines using AWS services, enabling automated deployments and improved release reliability.
- Built secure applications, including SSO solutions, with strong automated testing practices and over 80% unit test coverage.
- Created content migration tools and GraphQL architectures that enabled scalable publishing workflows for non-technical users.
- Mentored engineers and improved onboarding documentation and knowledge sharing across the team.

Glympse, Software Engineer 2019 – 2020

- Led migration from Google Maps to HERE Maps for a location-sharing platform.
- Developed React and TypeScript features with a focus on accessibility, and automated testing and deployment workflows using Jenkins and AWS.

Infosys (Microsoft), Frontend Engineer, 2018 - 2019

- Built reusable React/Fabric UI components and widgets for internal Microsoft platforms.
- Developed automated testing solutions using Selenium, Jest, and Azure DevOps.
- Implemented GraphQL integrations within an Agile development environment.
